# Legend

Hydra		10d Air separator
1	Heat generator	10e Dirt trap with magnetite separator
1a	Domestic hot water auxiliary heater	10f Solar/brine collecting container
1b	Heating auxiliary heater	10g Heat exchanger
1c	Heating/domestic hot water auxiliary heater	10h Low loss header
1d	Solid fuel boiler with manual feed	10i Flexible connections
2	Heat pump	11a Fan coil
2a	Air-to-water heat pump	11b Swimming pool
2b	Air/brine heat exchanger	12 System control
2c	Split heat pump outdoor unit	12a Remote control unit
2d		
	Split heat pump inner unit	• •
2e	Groundwater module	12c 2 in 7 multi-functional module
2f	Passive cooling module	12d Extension / mixer module
3	Heat generator circulation pump	12e Main extension module
3a	Swimming pool circulation pump	12f Wiring box
3b	Cooling circuit pump	12g eBUS coupler
3c	Cylinder charging pump	12h Solar controller
3d	Well pump	12i External controller
3e	Circulation pump	12j Cut-off relay
3f	Heating pump	12k Limit thermostat
3g	Heat source circulation pump	12l Cylinder temperature limiter
	Legionella protection pump	12m Outdoor temperature sensor
	Heat exchanger pump	12n Flow switch
1	Buffer cylinder	120 eBUS power supply unit
5	Monovalent domestic hot water cylinder	120 eBo3 power supply unit
		13 Ventilation unit
a	Bivalent domestic hot water cylinder	
b	Shift-load domestic hot water cylinder	14a Silencer
c	Combi cylinder	14b Fire protection flap
	Multi-functional cylinder	14c Air intake
je	Complete heating and hot water module	14d Restrictor flap
3	Solar collector (thermal)	14e Air diverter
'a	Heat pump brine filling unit	14f Extract air device
b	Solar pump unit	14g Air collector
'c	Domestic hot water station	14h Air filter
'd	Home unit	14i Air diverter with inspection opening
e .	Hydraulic block	14j Radial fan
'f	Hydraulic module	14k Bypass flap
		14к бураза пар
	Heat recovery module	
7h 7:	Heat exchanger module	NATI
7i 	2-zone module	Wiring
7 <u>j</u>	Pump group	BufBt Bottom temperature sensor of buffer cylinder
	Expansion relief valve	BufTopDHW Top temperature sensor for DHW section of buffer cylinder
3b	Potable water expansion relief valve	BufBtDHW Bottom temperature sensor for DHW section of buffer cylinder
3c	Safety group - potable water connection	BufTopCH Top temperature sensor for heating section of buffer cylinder
3d	Boiler safety group	BufBtCH Bottom temperature sensor for heating section of buffer cylin
Зе	Heating diaphragm expansion vessel	C1/C2 Enable cylinder charging / buffer charging
3f	Diaphragm expansion vessel for potable water	COL Collector temperature sensor
3g	Solar / brine diaphragm expansion vessel	DEM External heating demand for the heating circuit
3h	Solar in-line vessel	DHW Cylinder temperature sensor
3i	Thermal discharge safety device	DHWBt Bottom cylinder temperature sensor (domestic hot water cylinder temperature)
Эа	Individual room control valve (thermostatic/motorized)	EVU Energy supply company switching contact
9b	Zone valve	FS Heating circuit flow temperature sensor/ swimming pool sens
	Flow regulator valve	MA Multi-function output
9d	Bypass valve	ME Multi-function input
Эе	Hot water generation priotising diverter valve	PWM PWM signal for pump
9f	Cooling priotising diverter valve	PV Photovoltaic inverter interface
)g	Diverter valve	RT Room thermostat
9h	Filling / draining cock	SCA Cooling signal
911 9i	•	5 5
	Purging valve	,
)j	Tamper-proof capped valve	Solar yield Solar yield sensor
9k	3-way mixer	SysFlow System temperature sensor
)I	Cooling 3-port mixing valve	TD Temperature sensor for $\Delta T$ control system
9m	Increase in return flow for 3-way mixer	TEL Switch input for remote control
9n	Thermostatic mixing valve	TR Isolating circuit with switching floor-standing boiler
	Flow meter (Taco-Setter)	•
9o	Cascade valve	
		Multiple use components (x) are serially numbered (x1, x2,, xn).
Эр	Thermometer	the state of the s
9р 10а	Thermometer Pressure gauge	
90 9p 10a 10b 10c		
9p 10a 10b	Pressure gauge	
9p 10a 10b 10c	Pressure gauge	Brine flow (from source) —— Refrigerant low pressure ——
9p 10a 10b 10c ⊃otab	Pressure gauge Non-return valve	Brine flow (from source) — Refrigerant low pressure — Extract Air — Extract Air
9p 10a 10b 10c Potab Dome	Pressure gauge Non-return valve  ble water Solar water	• • • • • • • • • • • • • • • • • • • •
9p 10a 10b 10c ⊃otab ⊃ome ⊃HW	Pressure gauge Non-return valve  sole water — Solar water — setic hot water — Solar return — circulation — Electrical wiring ———	Brine return (to source) — Extract Air Cooling flow — Outdoor Air — —
Đρ I0a I0b I0c Oome Dome DHW Heatii	Pressure gauge Non-return valve  Solar water estic hot water — Solar return circulation — Electrical wiring ———	Brine return (to source) — Extract Air Cooling flow — Outdoor Air — —

Attention: This principal scheme does not supersede a real planning! This scheme does not include all neccessary valves and safety devices for a right installation. The actual applicable national and international standards and regulations have to be attended.

## Remarks and Restrictions

#### Caution! Schematic diagram!

- Non-binding recommendation! The information below shall never supersede the correct professional design of the system. This system
  schematic does not include all the shut-off and safety devices necessary for professional assembly. The applicable national and
  international laws and regulations, standards and directives must be adhered to!
- Subject to alterations in the schematic diagram! Full and/or partial reproduction of this schematic is subject to prior written approval by Vaillant GmbH.
- 3. During planning and design, installation and later use of the system, all operating instructions for installation and use created and applicable to the appliance, the accessories and/or all other system components must be adhered to.
- 4. Vaillant GmbH herewith strictly rules out any liability for claims for damages on whatever legal ground, especially for breach of obligations or delictual obligation, i.e. claims in tort. The aforesaid shall neither apply in cases of statutory liability, wilful intent or gross negligence, nor in case of injury to life, body or health nor in the case of violation of material contractual obligations (cardinal obligations) provided that a contract is concluded with the user of the schematic diagram hereunder. Cardinal obligations are material obligations or duties to be warranted by the contract in accordance with its subject or purpose; furthermore material contractual obligations are such obligations indispensable for the correct performance of such contract in the first place; the customer constantly trusts in and is entitled to trust in the adherence to such obligations. However, liability for claims for damages due to breach of such material contractual obligations shall be limited to the foreseeable damages typical with the respective contract unless such breach is a case of wilful intent or gross negligence or in case of liability due to injury to life, body or health. The aforesaid stipulations shall not entail any change in the burden of proof to the disadvantage of the user of the schematic diagram hereunder.

#### Legionella protection:

- ▲1 The system doesn't fullfill the hygienic requirements acc. to DIN 1988-200: 2012-5 (legionella protection).
- △2 Legionella protection function to be arranged by boilers with system
- ∆3 The system fullfills the hygienic requirements acc. to DIN 1988-200: 2012-5 (legionella protection) only with integrated electric peak heater or with system temperature </=60°C.
  </p>

### Solar:

- △4 The connection of an external solar yield sensor is not possible.
- △5 The connection of a controlled solar unit is not possible.
- ▲6 Mount the sensor of the overheat safety thermostat at an adequat position to avoid tank temperatures above 100°C.
- △7 Safety thermostat 10k has to be installed acc. to DIN EN 60335-1.

### Heat pump:

- △8 The heating output of the heat pump has to be aligned with the coil size of the DHW tank.
- Use of VIH RW 300 up to maximum heating output of the heat pump of 11 kW.
- ▲10 Use of VIH RW 400 B up to maximum heating output of the heat pump of 7 kW.
- △11 Use of VIH RW 400 B up to maximum heating output of the heat pump of 11 kW.
- △12 Additional technical requirements for use of low loss header:
  - Heating curve setting: as flat as possible
  - 2) Room temperature set point in each room; min. 17°C (according to DIN EN12831)
  - 3) Type of low loss header shall be aligned to heat pump
- △13 Heat source options 0020178458: number 1,2,3,4
- △14 Heat source options 0020199566: number 1,2,3
- ▲15 Min. 35 % of the nominal flow rate through the reference room without single room temperature control valve.
- ▲16 An additional heat generator has to be installed to reach the required domestic hot water temperatures acc. the actual standards and directives.
- △17 Pump with IF-module is necessary
- △18 Reference UV1 002003674

#### Boiler:

- △19 The connection of an outdoor sensor is possible for SDBG WHB.
- ▲20 For boilers without additional relay on board the DHW circulation pump has to be connected to extension module 2 to 7.
- ▲21 For configurations with DHW circulation pump an additional extension module has to be used.
- A22 An additional expansion vessel in the DHW loading circuit of the boiler has to be planned for boilers without integrated expansion vessel.
- ▲23 DHW tank loading simultaneously with heating operation is not possible.

### Cylinder:

△24 Inlet flow rate for cylinder loading (DHW and heating) < 1800 m³/h.

### Other:

- ▲25 The flow rate of the connected heat generators has to be aligned with the decoupler module.
- ▲26 Backup heater DHW must be protected by a self acting overheat thermostat.
- ▲27 Backup heater CH must be protected by a self acting overheat thermostat.
- △28 Max. 8 adresses for remote controls, solar loading units and DHW generation units.
- △29 DHW circulation pump has to be installed separately.
- △30 Optional component
- △31 The cascade can be configured with 1 to 7 heat generators.
- △32 The cascade can be configured with 1 to 4 DHW stations.
- △33 The cascade can be configured with 1 to 4 solar stations.
- ▲34 Use the same value for heating curve for HEATING 1 and HEATING 2.
- △35 The system can be configured up to 9 mixed circuits.

Attention: This principal scheme does not supersede a real planning! This scheme does not include all neccessary valves and safety devices for a right installation. The actual applicable national and international standards and regulations have to be attended.
